Intruder Watch Memo 5-77

To all Intruder Watchers:

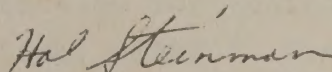

1. Attached to this memo is K6KA's consolidated feedback for the months of May and June.

2. Also attached is the latest roster of active Intruder Watchers. Again we would like to mention that an active Intruder Watcher is anyone who has submitted a report during the last six months.

3. Several IW'ers have asked, "what is MAYAK?" This is a Russian word meaning "beacon", and is used by them to identify their Second Program, from Radio Moscow. This second program is used as a regional program, with short news on the half hour, and good music the other times, unless the regional station inserts local material. This service uses six second ticks on the hour and half hour, and a somewhat different musical "interval signal" identification from that used on the First Program and Foreign Service, which is commonly heard on various services. There is a six-note musical interval signal used on the Radio Peace and Progress transmissions, such as those to South America (possibly on 7230 and 7240 kHz) in the 0030-0430Z period.

USSR frequently uses the MAYAK audio to jam, particularly the Russian programs originating at Radio Peking. This is done by overmodulating some 500%, causing almost complete loss of MAYAK modulation during jamming, though it often can be matched on peak audio with 7200 kHz clear broadcast (Irkutsk?) mornings for identification. It is frequently used on 7010, 7020, and 7035kHz. Sometimes these transmitters create families of spurious signals up or down the band, nearly white-noise, and sometimes additional spurious signals have an a.c. sound.-K6KA

Sincerely yours,

Harold M. Steinman, K1FHN
